On Feb. 15, 1965, a diffident but self-possessed high school student named Raymond Kurzweil appeared as a guest on a game show called *I've Got a Secret*. He was introduced by the host, Steve Allen, then he played a short musical composition on a piano. The idea was that Kurzweil was hiding an unusual fact and the panelists — they included a comedian and a former Miss America — had to guess what it was.

On the show (see the clip on YouTube), the beauty queen did a good job of grilling Kurzweil, but the comedian got the win: the music was composed by a computer. Kurzweil got \$200.

포럼의 연구 주제

- ▶ 창의와 상상이 세상을 바꾼다 (세상을 바꾸는 창의)
- ▶ 누구에게나 열린 평등 (누구나 기회를 얻는 평등)
- ▶ 모두가 모든 것을 공유 (존재한다면 공유한다)
- ▶ 행복한 삶이 보장되는 안전 (누가 안전을 보장할 것인가?)
- ▶ 배려하는 자유와 그에 따른 책임

공유 경제 / 협력 소비 / 접근 경제

- ▶ 공유경제(Sharing Economy): 2008년 미국 하버드대 법대 로렌스 레식(Lawrence Lessig) 교수의 책 'Remix: Making Art and Commerce Thrive in Hybrid Economy' 에서 사용된 말로, 지금까지 존재하는 상업적 경제 외에 관계에 기반을 두는 화폐 교환 밖의 새로운 경제 시스템을 의미
 - 가격의 잦대가 아닌 사회적 관계의 설정에 의해서 규정되어지며, 디지털 영역까지 확장됨을 강조
 - 사례: 위키피디아, 오픈 디렉토리, 인터넷 아카이브, 구텐베르크 프로젝트 등으로 대부분이 온라인 상에서 정보와 지식을 공유하는 형태
- ▶ 협력적 소비: 1978년 마르쿠스 펠슨 (Marcus Felson)과 조 스페스(Joe Spaeth)의 '커뮤니티 구조와 협력적 소비: 평생적 활동으로 접근'이라는 논문 에서 사용된 것이 시초. 이 개념은 레이첼 보츠먼(Rachel Botsman)과 루 로저스(Roo Rogers)가 2010년 책 'What Mine is Yours: The Rise of Collaborative Consumption'에서 사용하면서 유명해지기 시작
 - TED글로벌2012에서 보츠만은 협력적 소비는 사회 혁명으로 다수의 플랫폼을 가로지르는 신뢰의 개념이 새로운 협력 경제의 통화가 될 것이라고 주장
- ▶ 접근 경제 (Access Economy): 실제적으로 상품이나 서비스를 소유하지 않고 접근하는 것이 가능하도록 한다는 의미를 더 잘 표현 - "공유경제의 성장(The Rising of the Sharing Economy)"의 저자 닉 애스터

역사 및 패러다임의 변화

- ▶ 지역 미디어 기반의 오프라인 공유경제
 - 주차장 세일 (Garage Sale)과 같은 개인적인 중고 제품들의 판매/공유
 - '벼룩 시장'과 같은 지역 기반의 무가지 미디어를 활용한 중고장터
 - 구청의 재활용 센터와 같은 지역 공공기관의 활동
- ▶ 인터넷 세대의 도래와 함께 디지털 콘텐츠의 공유 확대
 - 정보의 공유 : 위키피디아, 네이버 지식인, 인터넷 아카이브
 - 음악의 공유 : Napster, 소리바다
 - 소프트웨어 : BitTorrent, SourceForge.net, Github, 코드플렉스
 - 비디오 : YouTube
 - 디지털 정보의 합법적인 공유 모델 : 크리에이티브 커먼즈
- ▶ 개인 소유물이 공유대상으로 전환
 - 에어비앤비, 우버, ...
- ▶ 공공자원의 활용도를 높이는 방향으로 진화
 - 공유 도시: 샌프란시스코, 서울특별시

What Is the “Sharing Economy”

- ▶ No official definition
- ▶ Generally organized around a technology platform that facilitates the exchange of goods, assets, and services between individuals across a varied and dynamic collection of sectors.
- ▶ Related terms include “collaborative economy,” “gig economy,” “on-demand economy,” “collaborative consumption,” or “peer-to-peer economy.” There are differences among these ideas, but substantial overlap in concept.
- ▶ Examples of companies that facilitate exchange of property or space:
 - Airbnb (rent out a room or a house)
 - RelayRides and Getaround (rent out a car)
 - Liquid (rent a bike)
- ▶ Examples of companies that facilitate exchanges of labor:
 - Uber and Lyft (get a ride or share a ride)
 - Taskrabbit (on-demand labor for a wide variety of tasks)
 - Handy (house cleaning and home repair)
 - Instacart (on-demand grocery-shopping services)

How would you like to live in an economy where robots do everything that can be predictably programmed in advance, and almost all profits go to the robots' owners?

Meanwhile, human beings do the work that's unpredictable - odd jobs, on-call projects, fetching and fixing, driving and delivering, tiny tasks needed at any and all hours - and patch together barely enough to live on.

Brace yourself. This is the economy we're now barreling toward.

California Labor Commission rules an Uber driver is an employee, which could clobber the \$50 billion company

ALYSON SHONTELL
 Jun. 17, 2015, 10:22 AM 150,341 169

FACEBOOK LINKEDIN TWITTER EMAIL PRINT

The California labor commission has ruled that an Uber driver is an employee, not a contractor, Reuters reports.

The decision was made after a San Francisco driver, Barbara Ann Berwick, filed a claim against the company.

The commission sided with her largely because it deemed Uber was "involved in every aspect of the operation."

GMB Legal Action On Uber Drivers

Wednesday, July 29, 2015

Leigh Day Legal Action For GMB Uber Drivers To Secure Rights On Pay, Holidays, Health And Safety, Discipline And Grievances

The Uber assertion that drivers are "partners" who are not entitled to rights at work normally afforded to workers will be legally contested in court says GMB.

GMB, the union for professional drivers, has instructed Leigh Day to take legal action in the UK on behalf of members driving for Uber on the grounds that Uber is in breach of a legal duty to provide them with basic rights on pay, holidays, health and safety and on discipline and grievances.

GMB is contesting the Uber assertion that drivers are "partners" so are not entitled to rights normally afforded to workers.

Uber operates a car hire platform that connects passengers to thousands of drivers through an app on the passenger's smartphone.

Using the app, passengers can request they are picked up from any location within London (or 300 other cities worldwide). Passengers pay Uber for the journey, which then passes on a percentage of that payment to the driver.

GMB claim that Uber should conform to employment law as follows:

- Uber should ensure that its drivers are paid the national minimum wage and that they receive their statutory entitlement to paid holiday. Currently Uber does not ensure these rights for its drivers
- Uber should address serious health and safety issues. Currently Uber does not ensure its drivers take rest breaks or work a maximum number of hours per week. GMB content that this provides a substantial risk to all road users given that, according to Uber's CEO, there will be 42,000 Uber drivers in London in 2016.
- Uber should adhere to legal standards on discipline and grievances. Currently drivers have being suspended or deactivated by Uber after having made complaints about unlawful treatment, without being given any opportunity to challenge this.

공유 경제 기업이 극복할 과제 (PwC)

- ▶ New regulatory action makes sharing economy transactions illegal or costly to facilitate
- ▶ Governments raise tax burden on sharing economy transactions
- ▶ High-profile events raise significant safety concerns, triggering a loss of trust in the sector.
- ▶ Unanticipated technological disruption (that leapfrogs sharing economy models)
- ▶ As sharing economy platforms scale, they lose authenticity and differentiation over competitors
- ▶ Potential for large-scale acquisitions that reduce investment and subsequent growth potential

호주 노동당, '공유경제' 활성화 6가지 조건

- ▶ 공유하려는 주된 자산은 본인의 소유여야 한다
- ▶ 새로운 서비스는 좋은 급료와 노동 환경을 제공해야 한다
- ▶ 모든 이들은 공정한 세금을 지불해야 한다
- ▶ 공공의 안전을 위해 적절한 보호 조치가 필요하다
- ▶ 모두에게 접근권이 열려있어야 한다
- ▶ 규칙에 따라 운영되어야 한다

중장기 이슈

- ▶ 향후 10년 (2015-2025)
 - 정보와 지식의 공유 → 자원의 공유 → 실시간 데이터의 공유
 - 새로운 공유 기술의 등장 (IoT 기술에 의한 데이터 공유, VR 기술)을 통한 감각의 공유 (인간과 로봇의 초기 결합), 센서 데이터의 공유 - 모바일 클라우드센싱
- ▶ 향후 20년 (2025-2035)
 - 행동과 경험의 공유 (여행, 스포츠, 개인 관계)
 - 소프트웨어나 로봇과 공유 또는 원격 접근과 홀로그램을 통한 간접 경험 확대
- ▶ 향후 30년 (2035-2045)
 - 기억의 공유, 일부 의식의 공유
 - 타자와의 공유가 BCI 등을 통해 정보가 뇌로 전달 → 학습의 변화
- ▶ 허용의 범위와 대상을 규제할 수 있는가? 폭력, 섹스, 전쟁과 살인, 비인간적 내용과 경험
- ▶ 디지털화된 감각과 경험의 공유는 진정한 공유로 해석할 것인가? 이를 통한 학습 수준과 자격 인증을 해줄 것인가?
- ▶ 사회의 공유 인프라는 어떻게 되어야 하는가?

Trust and Privacy in Mobile Experience Sharing - Future Challenges and Avenues for Research

Ioannis Krontiris*, Marc Langheinrich† and Katie Shilton‡

*Institute of Business Informatics, Goethe University Frankfurt, Germany; ioannis.krontiris@m-chair.de

Abstract—Mobile consumer devices are increasingly used as personal sensing instruments, where users record their daily habits, track their physical activity, or monitor their health. Research is underway to extend today's diversity of vendor-designed "walled garden" repositories, ultimately repositioning individuals as producers, consumers, and remixers of a vast openly shared public data set. By empowering people to easily measure, report, and compare their own personal environment, such tools transform everyday citizens into reporting agents who uncover and visualize unseen elements of their own everyday experiences. With this important new shift in mobile device usage – from a communication tool to a ubiquitous "experience sharing instrument" – comes a new dimension in trust and privacy challenges. Today's privacy and trust tools that address Web surfing and simple location-based services already struggle to be adopted in practice. We argue that in order to prepare for tomorrow's sensor sharing, privacy and trust must be addressed holistically, incorporating both technical approaches and actual sharing behavior. This article summarizes the results of a five-day Dagstuhl Seminar on mobile experience sharing and outlines future research necessary in this domain.

I. INTRODUCTION

The increasing availability of sensors on today's smartphones and other everyday devices, carried around by millions of people, has opened up diverse kinds of information gathering by people and their devices. Eventually, researchers envision the creation of a unified data-sharing infrastructure, where people and their mobile devices provide their collected data streams in accessible ways to third parties interested in integrating and remixing the data for a specific purpose. This trend is often named *Mobile Crowdsensing* [1].

Mobile crowdsensing applications can span a broad spectrum of subjects, such as public health and wellness, environmental monitoring, sustainability, urban planning, and cultural expression. A popular example is using sensor-equipped mobile phones that allow everyday citizens to collect environmental data such as noise and air pollution, in an effort to improve both their individual lives (e.g., by mapping pollution-free bike routes) and their community (e.g., by alerting city officials to excessive traffic levels in a neighborhood). Moreover, by tracking one's own activities – such as work, sleep, exercise, diet, or mood – and sharing this information with other people, "quantified self" scenarios further offer novel applications and opportunities for self-improvement [1], [2].

It is obvious that these novel paradigms open up a wealth of concerns for personal privacy: gathering and sharing one's

own activities allows others intimate insights into one's work performance, health status, physiological development, professional and leisure activities, and even psychological well-being. Even innocuous data such as temperature readings and carbon monoxide levels may give away personal information – in the form of location coordinates and timestamps that indicate an individual's movement over days and weeks – and can easily lead to unwanted repercussions, e.g., by lowering real estate value in neighborhoods that record unfavorable sensor readings. Moreover, as sharing practices become more fluid than in desktop-based online environments, control over such information flows becomes even harder to maintain [2].

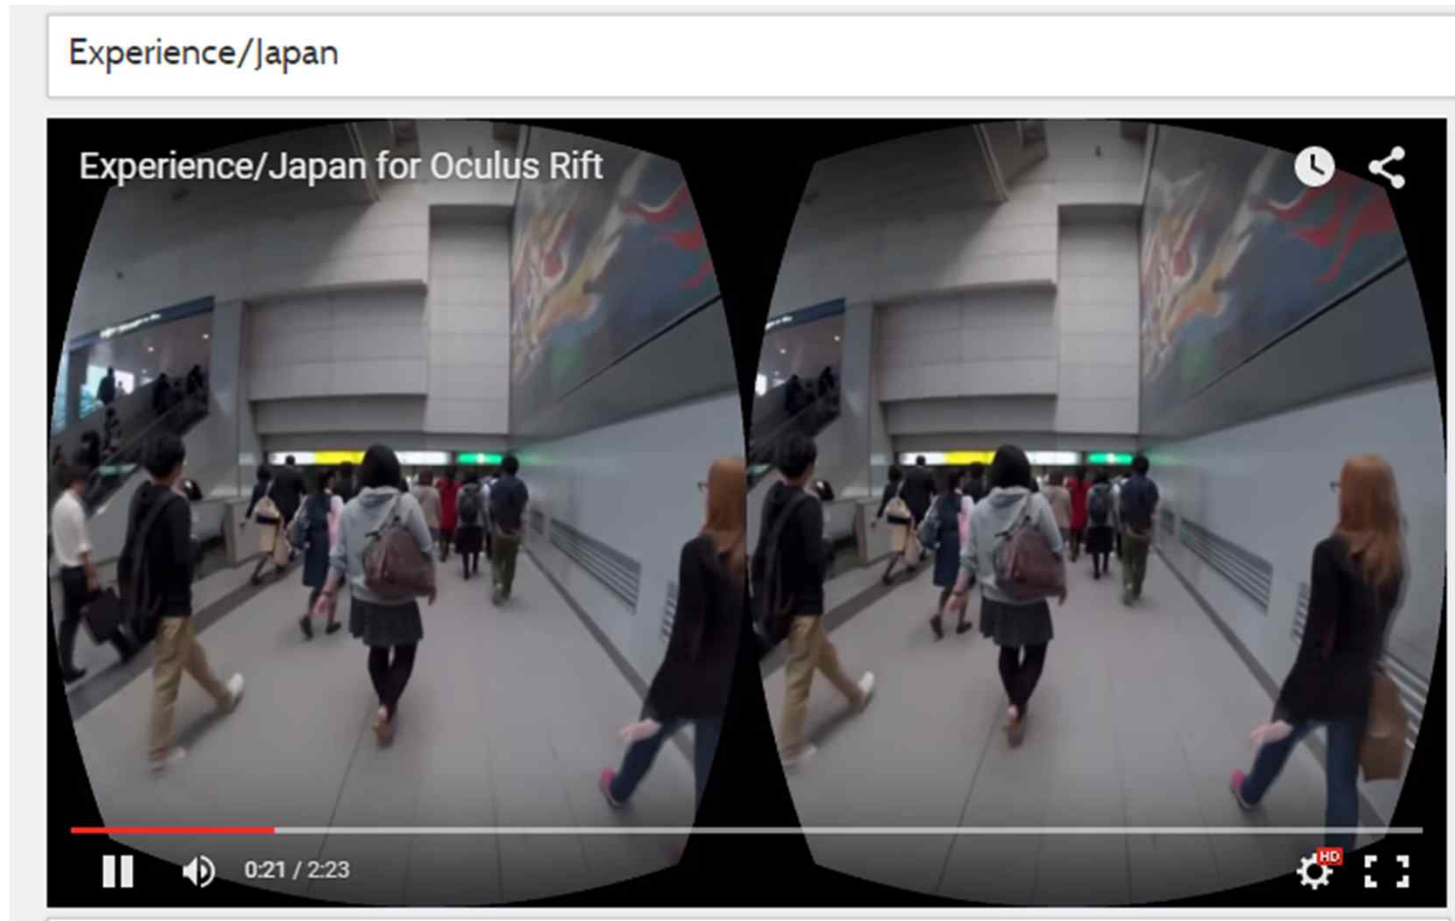

During the last several years, research on Privacy-Enhancing Technologies (PETs) has produced a wide variety of mechanisms [3]. Yet for all innovation in this field, PETs have so far not been widely adopted in practice. It is hard to provide a definitive explanation for this, given the complexity and interdisciplinary nature of the problem. However, various scholars have repeatedly identified the lack of adequate consideration of the various stakeholders' viewpoint as one of the core issues and they point out that simple technological solutions are often not effective in capturing the interests and concerns of users [4], [5]. Consequently, research in mobile crowdsensing – i.e., the development of tools and architectures to enable the ubiquitous sharing of experiences – requires a renewed effort in providing corresponding tools for ensuring trust and privacy in such infrastructures and applications.

This article summarizes the output of a recent Dagstuhl Seminar on this topic, titled "My Life, Shared – Trust and Privacy in the Age of Ubiquitous Experience Sharing" [5]. The seminar brought together experts in computer science and engineering, economics, social sciences, and legal sciences, in order to discuss latest developments and future challenges for trust and privacy in mobile crowdsensing. In particular, the participants identified challenges on three distinct levels, which we will highlight in this article:

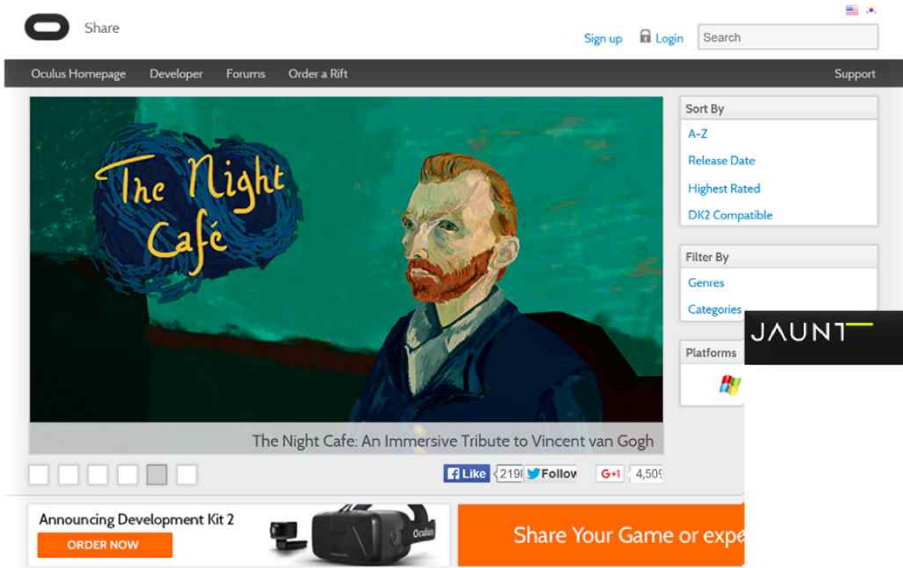

- Privacy Engineering: We highlight research challenges of integrating PETs in mobile crowd sensing applications.
- Sharing Practices: Taking the user's perspective, we investigate how the disclosure preferences and practices of sharing personal sensitive data can change and how our tools can support this process.
- Fairness and Social Justice: We might tend to think that the development of new application in the area of

As part of a class last year on "Romeo and Juliet," Jennie Choi, an English teacher at Mariano Azuela Elementary School in Chicago, took her sixth-grade students on a tour of Verona, the Italian city where Shakespeare's play transpires.

During the excursion, Ms. Choi asked her class to examine the variegated facade of a centuries-old building, known on tourist maps as "Juliet's House," where the family that may have been the inspiration for the fictional heroine once lived. She also encouraged her sixth graders to scrutinize the deteriorated tomb where they could imagine the Juliet character had died.

Holographic Computing

Holographic computing is here.

When you change the way you see the world, you can change the world you see.

Microsoft HoloLens is the first fully un tethered, see-through holographic computer. It enables high-definition holograms to come to life in your world, seamlessly integrating with your physical places, spaces, and things. We call this experience mixed reality. Holograms mixed with your real world will unlock all-new ways to create, communicate, work, and play.

A more natural way to interact.

There isn't a screen to touch or a mouse to click. Create and shape holograms with gestures. Communicate with apps using your voice. Navigate with a glance. Microsoft HoloLens understands your gestures, gaze, and voice, enabling you to interact in the most natural way possible.

New ways to teach and learn.

It's easier to show than to tell. With HaloNotes in Skype, friends and colleagues can help you with difficult tasks. They can see your environment as you see it and from their tablet or PC they can draw instructions that appear as holograms in your world. Get real-time help from someone who sees what you see.

New ways to visualize your work.

Go beyond what a 2D render can do by working in three dimensions. Pin holograms to physical objects so you can size and scale them in real time. Make smarter decisions when you see your work from every angle, in relation to the world around you.

New ways to collaborate and explore.

Go somewhere you've never been and examine it from every angle. See holograms from your colleague's perspective if he's in the next room or on the other side of the world. Explore a new dimension grounded in, but not limited to, the physical world.

Why NASA Wants Microsoft's HoloLens in Space

The rocket carrying two HoloLens headsets to the International Space Station blew up in June, and NASA is planning another launch.

By Rachel Metz on September 8, 2015

“NASA hopes to use HoloLens aboard the space station to allow astronauts to work with a remote expert who can see what the astronaut sees and help with unfamiliar tasks”

Astronaut Luca Parmitano uses HoloLens at the underwater Aquarius Reef Base, which is located below the Florida Keys.

WHY IT MATTERS

Augmented-reality technology could be useful to astronauts in space for overlaying digital instructions atop equipment or letting them work closely with remote coworkers.

The explosion in June of the SpaceX rocket that was headed to the International Space Station felt like “a punch in the gut” to Jeff Norris, the project manager for two HoloLens projects that NASA is working on at its Jet Propulsion Laboratory (JPL) in Pasadena, California. Among the items on board were two HoloLens headsets – Microsoft’s forthcoming augmented-reality gadgets.
